PETER MWANGI

SOFTWARE ENGINEER | AI EVALUATION | TECHNICAL & VISUAL CONTENT GENERALIST

Nairobi, Kenya · Remote | petrasmwash1@gmail.com | +254 799 397 003
linkedin.com/in/peter-mwangi-152420292 | github.com/PETERMWASH286

PROFESSIONAL SUMMARY

Computer Science graduate and software engineer with experience building APIs, backend services, and AI-enabled workflows. Brings a detail-focused approach to visual review, image annotation, content organization, and evidence-based quality checks. Skills include photography, photo editing with Adobe Photoshop, image labeling and descriptive metadata, alongside AI output evaluation, technical documentation, and remote collaboration. Comfortable following detailed guidelines, incorporating feedback, and delivering organized work to deadlines.

CORE SKILLS

Photography & visual content: Photography, photo taking and editing, Adobe Photoshop, cropping and composition, image quality review, captions, image labeling, descriptive metadata, visual consistency checks

AI evaluation & annotation: AI-generated output review, rubric-based scoring, instruction adherence, image/video annotation workflows, object and event labels, visual grounding, evidence-based feedback

Software engineering: Go, Python, TypeScript, JavaScript, REST APIs, microservices, React, Next.js, debugging, automated testing, code review

Data & infrastructure: PostgreSQL, MySQL, Redis, RabbitMQ, Docker, Linux, Nginx, Git, CI/CD, VPS deployment, monitoring

Generalist strengths: Research and source verification, documentation, data organization, issue reporting, written communication, independent work, remote collaboration, deadline management

PROFESSIONAL EXPERIENCE

Software Engineer | AstroByte Tech Solutions Limited

2023–2025 · Enterprise platforms, APIs, and production delivery

- Built and improved software across healthcare, education, and operations platforms using Go, Python, TypeScript, React, Next.js, PostgreSQL, and MySQL.
- Developed AstroCare HMIS workflows covering registration, billing, triage, consultations, laboratory, radiology, pharmacy, and specialized care.
- Designed APIs, role-based access controls, and tenant data separation to support secure handling of sensitive records.
- Investigated issues, tested fixes, documented behavior, and supported deployment using Docker, Nginx, Git, and CI/CD workflows.
- Integrated external services and AI-enabled components, checking response quality, error handling, and reliability.

SELECTED PROJECTS

LLM Gateway & Orchestrator | Go, Redis, OpenAI API, Docker

Built an LLM proxy with prompt caching, rate limiting, load balancing, and structured responses; reported a 35% API latency reduction using Redis prompt caching.

AstroCare HMIS | Go, Python, React, PostgreSQL, Docker, Nginx

Multi-tenant hospital platform spanning 8+ clinical and administrative workflow areas, with access controls, tenant separation, and ICD-10/CPT coding workflows.

AstroEdu Microservices Platform | TypeScript, Next.js, API Gateway

Designed a cloud-oriented education platform across identity, learning, finance, analytics, notifications, and AI integrations.

Distributed Task Scheduler | Python, Redis, RabbitMQ, PostgreSQL

Implemented asynchronous job workflows with retries and dead-letter handling for background tasks, scheduled reports, and data ingestion.

AI EVALUATION & QUALITY METHODS

AI coding-agent evaluation: Assess Codex and Claude Code on repository tasks, planning, tool selection, execution traces, code diffs, test results, and instruction adherence.

Code review & QA: Review code for correctness, security, maintainability, edge cases, and requirement coverage; reproduce issues and validate fixes.

Visual and content review: Apply annotation concepts to image and video workflows, including object/event labels, visual grounding, consistency checks, and guideline-based review.

Research quality: Verify claims and citations, assess methodology, and flag unsupported conclusions or factual errors.

EDUCATION

BSc Computer Science | Kenyatta University · Graduated 2024

Relevant study: algorithms, distributed systems, databases, software architecture, networks, operating systems, and AI fundamentals.

WORKING STYLE

Comfortable with remote and asynchronous work, detailed guidelines, independent investigation, and collaborative review. Communicates findings clearly, organizes submissions carefully, incorporates feedback, and prioritizes accuracy, consistency, and deadlines.
